Hiring Manager
Fitch Group
Toronto, ON

Re: Engineering Director

Dear Hiring Manager,

I am excited to be considered for the Engineering Director role at Fitch Group. I bring more than 20 years of building production-grade software in financial services and enterprise settings. Today I lead three engineering teams of 17 people while remaining hands-on as Principal Architect. That mix of people leadership and deep technical ownership is what I would bring to Fitch.

At AtrioIQ, an AI-powered financial and portfolio intelligence platform, I built the engineering organization and its operating model. The three teams cover Platform & Backend, AI & Data, and Frontend & QA, each with a team lead reporting to me. I own the architecture roadmap, delivery plan, budget, and cloud and AI-provider costs, and I report delivery, risk, and KPIs to executive stakeholders. I hire and develop engineers, run performance reviews, and coach senior engineers into tech-lead roles.

On the technical side, I designed a microservices platform built on Java 17/Spring Boot, Python/FastAPI, React, and AWS. It includes a credit and risk service that ingests SEC EDGAR/XBRL filings, normalizes data from five market-data providers, and computes credit metrics such as leverage, interest coverage, and debt/EBITDA with full data lineage and an audit trail. I also designed the platform's AI analyst engine, which orchestrates Claude, OpenAI, and Gemini with structured, validated output and strict guardrails: no invented numbers and every gap clearly labeled. Fitch's reputation rests on the same principle.

Before AtrioIQ, I spent four years at Synopsys/Black Duck auditing the software quality, architecture, and engineering processes of companies going through mergers and acquisitions. Earlier, I led teams of 5 to 7 engineers on projects for Santander, Mapfre, and Telefonica. That experience taught me how to raise engineering standards across an organization, not just within one team.

I would welcome the chance to discuss how I can help Fitch's Toronto technology team grow, deliver, and adopt AI-enabled engineering responsibly. Thank you for your time and consideration.

Sincerely,

Godofredo Alves
