Hiring Manager
Fitch Group
Toronto, ON

Re: Senior Full Stack Engineer, Associate Director

Dear Hiring Manager,

I am excited to apply for the Senior Full Stack Engineer, Associate Director role at Fitch Group. I am a hands-on full-stack architect with more than 20 years of experience building production-grade applications, with a strong focus on Java, Spring Boot, Python, React, and AWS. Today I am the technical lead for three engineering teams of 17 engineers, and I still write code, review designs, and troubleshoot production issues every week.

At AtrioIQ, an AI-powered financial and portfolio intelligence platform, I designed and built a microservices architecture end to end. It includes a React/TypeScript front end, a Node.js API gateway, a Python/FastAPI analytics service, and a Java 17/Spring Boot credit and risk service on AWS (ECS Fargate, SQS, RDS PostgreSQL). That service ingests SEC EDGAR/XBRL filings and data from five market-data providers, uses Spring Batch and Resilience4j for reliable ingestion, and calculates credit metrics with a full audit trail.

Your team is bringing AI-enabled tools into its engineering workflow, which is exactly how I work. I introduced AI coding agents (Claude Code, Codex) across my teams with shared project context and clear quality gates, which noticeably sped up delivery without lowering standards. I also designed the platform's AI analyst engine, which orchestrates Claude, OpenAI, and Gemini with structured, validated output and strict guardrails against invented data.

I care deeply about engineering practice. I set up CI/CD with GitHub Actions and Docker, testing with JUnit, pytest, Vitest, and Playwright, and design reviews backed by architecture decision records. At Synopsys/Black Duck, I spent four years auditing other companies' code quality and architecture. Earlier, I led engineering work for Santander, Mapfre, and Telefonica, so I understand the reliability and rigor that financial services require.

I would welcome the opportunity to discuss how I can contribute to Fitch's Toronto technology team. Thank you for your time and consideration.

Sincerely,

Godofredo Alves
